To work out running cost per hour, find out what your supplier will charge per litre, then multiply the flow rate by 60 i.e. oil @ 23 pence/litre for B1 min 4cc x 60 mins = 0.24 per hour. 0.24 x 23 pence = £0.055  
Note Stated outputs over 7kW may not be achievable unless flue heights over 2.5 metres are available
